

Special Issue

Trends in Real Estate Economics and Livability

Message from the Guest Editors

This Special Issue reports on emerging trends in real estate economics and urban livability research. This will help to address the pressing challenges presented by megacities and livability issues. It is a well-known fact that major global megacities suffer from reduced livability due to high housing costs, housing inequality, and residential land scarcity. In contrast, some small and medium-sized cities are experiencing urban shrinkage due to migration, housing vacancy, and depressed real estate markets. Therefore, promoting healthy and sustainable real estate market development is required to improve urban livability. This new Special Issue, hosted by the scientific journal *Buildings*, aims to garner excellent contributions and high-impact articles examining academic topics of urban construction and living space from the perspective of real estate economics and livability. About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
