

Special Issue

Deep Learning Models in Buildings

Message from the Guest Editors

This Special Issue explores the cutting-edge integration of deep learning technologies within the construction management and building sectors, emphasizing the transformative impact these technologies have on enhancing efficiency, sustainability and innovation in building design, construction and maintenance. By leveraging complex algorithms, these models provide unprecedented insights into optimizing building performance, energy usage and material selection, thereby supporting the construction industry's shift toward more sustainable and smart building solutions. This focus on deep learning models showcases their potential to drive advancements in construction management practices, promoting not only environmental sustainability, but also operational efficiency and cost-effectiveness in the face of evolving industry challenges. About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
