

Special Issue

Advances in Inverse Problem Applications in Structural Health Monitoring

Message from the Guest Editors

This Special Issue focuses on the latest advancements in inverse problem formulation of structural health monitoring problems. The advancement in this field is expected to lay the foundation for ground-breaking technologies to maintain civil and mechanical

structures. We are looking forward to papers that suggest new ideas on three main fronts: **Forward Problem:** Robust Structural Modeling; Quick Structural Simulation; Sampling-Based Modeling; Experiment-Based Modeling. **Problem Formulation:** Damage Formulation and Damage Indicators; Sensing Strategy; Design Variables complexity; Structural complexity.

Inverse Problem Solving: Robust Optimization Formulation; Dedicated Inverse Problem-Solving Strategies; Real-Time Solutions; Solutions for Portable Computing. **We are looking forward to applications related, but not limited to the following topics:**

- Damage Identification in Composite and Noncomposite Material Structures;
- Structural Health Monitoring in Masonry;
- Computer-Aided Design and Simulations;
- Probabilistic Modeling...

Guest Editors

Dr. Brahim Benaissa

Dr. Samir Khatir

Prof. Dr. Roberto Capozucca

Dr. Musaddiq Al Ali

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
