

Special Issue

Advances in Sustainable Construction

Message from the Guest Editors

Relevant topics for this Special Issue include but are not limited to the following subjects:

- Modern methods of construction, including prefabrication, off-site construction, modular construction, etc.
- Technology innovation to improve construction performance, including prefabrication technology, robotic technology, etc.
- Monitoring of construction processes for sustainable management.
- Decision optimization in sustainable construction projects.
- Clean production in the construction sector.
- Greenhouse gas emission calculation methods for construction projects.
- Quantitative assessment of greenhouse gas emissions in buildings
- Quantification of greenhouse gas emissions of construction equipment on-site and off-site.
- Uncertainty analysis for measuring greenhouse gas emissions.
- Management in the treatment of construction and demolition waste.
- Measures of dynamic properties of infrastructures and urban construction.
- Resilient cities and sustainable urban.

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
