

Special Issue

Study on Building Simulation

Message from the Guest Editors

This Special Issue will contribute to the field of building simulation. This includes Digital Twins and Building Information Modeling, Agent-Based Modeling for emergency evacuation, Finite Element Modeling for energy and structural analysis, Artificial Intelligence algorithms for data processing (e.g., unusual behavior detection), Virtual and Mixed Reality for health and safety training or controls, Virtual Construction Design and Process, innovative sensing units and SHM algorithms, protection strategies to reduce seismic vulnerability, energy modeling, and others.

Research on current building types will be considered and new design concepts are also welcome. Building technologies have been extended to reinforced concrete buildings, masonry buildings, and prefabricated solutions (concrete, steel, and timber). This will contribute to the Next-Generation EU programs listed in the Operational Arrangements. Component 3 of Mission 2, M2C3 “Energy Efficiency and Redevelopment of Buildings”, includes improving the efficiency and safety of the public building stock, and seismic retrofitting of the private building stock and social housing.

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
