## Seismic Analysis of Multistoried Buildings

### Message from the Guest Editor

I am pleased to invite you to submit a contribution to the Special Issue “Seismic Analysis of Multistoried Building” of the journal “Buildings”. Nowadays structures are higher, lighter, and some of them have irregular configuration both in elevation and plan. These buildings need careful design as they become more susceptible to dynamic load activities such as earthquake. During this event, most structures have an inherent damping in them which results in some of the input seismic energy being dissipated, but a large amount of energy is absorbed by the structure, causing it to undergo several deformations and maybe even collapse. So, over the last year, there has been great interest in the design and use of seismic energy dissipation devices (passive, semi-active, active and/or hybrid). In this Special Issue, original research articles and reviews are welcome. Contributions addressing design, assessment, numerical and experimental investigations, seismic analyses and seismic loss estimation of multistoried buildings are welcome. I look forward to receiving your contributions.

## About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

### Author Benefits

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Construction and Building Technology) /  
CiteScore - Q1 (Architecture)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
