

Special Issue

Energy Efficient, Low Carbon and Energy Flexible Buildings

Message from the Guest Editors

This Special Issue of *Buildings* aims to publish a collection of articles focused on energy-efficient, low-carbon and energy-flexible buildings. We welcome papers presenting new research results and proven practices aimed at reducing the energy needs of a building and improving indoor environment quality, as well as those considerably advancing building science. Special attention will be given to practical and experimental research articles reporting significant innovations. Articles reporting advances in theoretical and simulation methods are welcome once results are fully validated using appropriate experimental data, as well as those reporting application of numerical or theoretical methods for the analysis of new technology and materials and innovative designs. Additionally, this Special Issue is also focused on innovative, cutting-edge technologies and knowledge, all rigorously verified with measurement and analysis. We encourage submissions of collaborative, multidisciplinary research results with broader significance.

Guest Editors

Dr. Weiwei Wang

School of Petroleum Engineering, Yangtze University, Wuhan, China

Prof. Dr. Fuyun Zhao

School of Power and Mechanical Engineering, Wuhan University, Wuhan 430074, China

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
