

Special Issue

Research on Statics and Dynamics of Structures

Message from the Guest Editors

We are pleased to invite you to contribute to the Special Issue "Research on Statics and Dynamics of Structures". Various static and dynamic loads can affect the safety and durability of civil structures, especially for complex accidental loads such as earthquakes, wind, vehicle, waves, etc. The objective of this Special Issue is to collate the most up-to-date research trends in performance assessment of structures under static and dynamic loads. Within this framework, we welcome contributions that discuss analytical, experimental, and numerical methods for evaluating the linear and non-linear structural response, and advanced approaches for the analysis of new and existing structures including frameworks, bridges, dams, nuclear power plants, ocean platforms, etc.

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
