# Special Issue

# Dynamic Response of Civil Engineering Structures under Seismic Loads

## Message from the Guest Editors

In civil engineering structures such as bridges, houses, and dams, seismic loads are a crucial type of load and must be carefully considered during design; otherwise, an inadequate seismic design could lead to catastrophic consequences. Understanding how civil engineering structures respond under seismic loads is essential to the optimization of seismic design. The scope of this Special Issue includes, but is not limited to, the following topics:

- dynamic response of civil engineering structures under seismic loads;
- seismic loads laboratory/in-situ tests;
- seismic theoretical analysis and numerical simulations.

Considering your interest and involvement in this topic, we would be honored to receive a contribution from you in order to aid the success of this Special Issue. For more information, please click on the special issue link: https://www.mdpi.com/journal/buildings/special_issues/U8D1XA4I12

## Guest Editors

Prof. Dr. Yanyan Li

Faculty of Urban Construction, Beijing University of Technology, Beijing 100124, China

Dr. Jingshu Xu

College of Architecture and Civil Engineering, Beijing University of Technology, Beijing 100124, China

## Deadline for manuscript submissions

closed (15 June 2025)

# About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

### Editor-in-Chief

Prof. Dr. David Arditi
Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

### Author Benefits

**High Visibility:**

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

**Journal Rank:**

JCR - Q2 (Construction and Building Technology) / CiteScore - Q1 (Architecture)

**Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
