Advances in Project Management in Construction

Message from the Guest Editors

Construction management faces new challenges given the popularity of mass and super construction projects, innovative project delivery methods and financing, emerging technologies in design and construction, and transnational cooperation initiatives. Project management has become more complex, and it requires advanced models and technology to handle the organizational diversification, digitalization, and internationalization of investment. It is urgent to propose solutions through research and practice, to improve the traditional project management theory, and to accommodate the complex project management.

Guest Editors

Prof. Dr. Huimin Li

School of Water Conservancy, North China University of Water Resources and Electric Power, Zhengzhou, China

Dr. Chengyi (Charlie) Zhang

Department of Civil & Architectural Engineering, University of Wyoming, Laramie, WY, USA

Dr. Jiyong Ding

Business School, Hohai University, Nanjing 211100, China

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
