Special Issue

Advances in Environmentally-Friendly Building Materials in Construction

Message from the Guest Editors

This Special Issue aims to publish a wide range of articles that address topics including, among others, alternative construction materials, use of by-products and industrial wastes, eco-efficient and carbon-neutral construction materials, durability, life cycle analysis, geopolymers, and innovative technologies of construction.

- circular economy
- sustainable and low-carbon building materials
- eco-friendly materials and processes
- utilization of by-products and waste materials in construction
- construction and demolition wastes
- recycled aggregates
- alternative binders to Portland cement (geopolymers)
- 3D concrete printing
- concrete durability
- life cycle analysis

Guest Editors

Prof. Dr. Ruby Mejía de Gutiérrez
Composites Materials Group (CENM), School of Materials Engineering, Universidad del Valle, Calle 13 #100-00, E44, Cali 760032, Colombia

Prof. Dr. Rafael A. Robayo-Salazar
Composites Materials Group (CENM), School of Materials Engineering, Universidad del Valle, Calle 13 #100-00, E44, Cali 760032, Colombia

Deadline for manuscript submissions

20 July 2026

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi
Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) / CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
