Special Issue

Costs and Cost Analysis in Construction Project Management

Message from the Guest Editor

One of the most critical success factors for construction projects is the “Iron Triangular” cost–quality–time. One step further would be, “is the right project in progress?” This level of project success is one of the most preferred by owners, sponsors, and developers and is known as “value for money”. Again, though, the question remains of which the most effective approach is. The evolution of technology and the new era of the 4th Industrial Revolution with the introduction of digital technologies in the construction sector such as building information modeling (BIM) and blockchain could pave new avenues for successful projects.

The aim of this Special Issue is to investigate ways for the adoption of new technologies for efficient and effective cost estimation and analysis in the construction industry. For scholars interested to submit papers to the Special Issue, please click “Submit to Special Issue” or contact Astoria Yao: astoria.yao@mdpi.com.

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi
Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) / CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
