Message from the Collection Editor

Dear Colleagues,

Radiology plays a pivotal in the diagnostic, treatment, and follow-up of cancers. At the same time, with the expansion of therapeutic options, interventional radiology is playing a growing part in the curative and palliative management of cancers. Tailored treatment strategies are becoming increasingly available for patients, with a dramatically increasing role of imaging and especially radiomics in the pretreatment assessment of patients as well as follow-up after treatments. This Special Issue illustrates the growing role of diagnostic radiology and of radiomics in the prognostication of cancer before treatments or at an early stage, and it provides insights into new therapeutic options available thanks to the development of interventional radiology as a standard of care in several cancers, especially in hepatocellular carcinoma. Future perspectives for further tailored strategies and mini-invasive therapeutic options are also presented and discussed.

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Oncology*) / CiteScore - Q1 (*Oncology*)
