Deadline for manuscript
submissions:

closed (15 December 2015)

Message from the Guest Editor

Dear Colleagues,

The Ras Association Domain Family (RASSF) consists of ten members, which encode either a C-Terminal Ras association (RA) domain or a N-terminal RA. Most of the RASSF are tumor suppressor genes that are frequently epigenetically inactivated in human cancers. Functional studies have shown that RASSF signaling is involved in several pathways including Ras and Hippo. Deregulation of the RASSF members alters cell cycle control, growth and apoptosis of cancer cells. Thus aberrant RASSF signaling plays a key role in the pathogenesis of human cancers. In this special issue of *cancers* we invite you to submit an original manuscript analyzing the function or epigenetic alteration of the RASSF members in cancers.

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Oncology*) / CiteScore - Q1 (*Oncology*)
