Message from the Guest Editor

Dear Colleagues,

Photodynamic therapy (PDT) for cancer came to prominence in 1978, in a landmark publication by Tom Dougherty regarding the use of Photofrin. Since then, hundreds of papers have presented the structures of different novel photosensitizers that could be used for anti-cancer PDT. Many investigators have dissected the signaling pathways and gene expression patterns that lead to cell death or cell survival after PDT. Nanotechnology is playing an increasingly major role in modern PDT research. Animal models allow testing of new PDT protocols, and, in the case of immunocompetent animals, also allow investigation of the anti-tumor immune response that often occurs after PDT. Clinical trials of PDT for cancer continue to be conducted and new regulatory approvals are eagerly awaited.

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Oncology*) / CiteScore - Q1 (*Oncology*)
