Message from the Guest Editor

Dear Colleagues,

Immune-based therapies are powerful tools in the fight against cancer. The similarities in canine and human cancer genetics and therapeutic responses have promoted comparative oncology as an important research area for developing better treatments for animal and human disease. New technical developments in genomics and proteomics paired with the fervent climate of modern data science bioinformatics have made comparative oncology a cutting-edge field when it comes to understanding genetic and epigenetic causes of cancer. This Special Issue is focused on recent advancements in the discovery of immune-based therapies and how comparative oncology will lead to a better understanding of how the immune system can be harnessed for personalized and preventative medicines.

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
