Advancing Cancer Research by Exploring the Tissue Engineering Toolbox

Message from the Guest Editor

Cancer research requires physiologically relevant experimental 3D in vitro models to advance our understanding of tumour biology, pathogenesis, and drug response at the tissue level. The native tumour microenvironment (TME) consists of cancerous and non-cancerous cells surrounded by an extracellular matrix. We can reconstruct relevant TME in 3D in vitro using tissue engineering and a biomaterial development toolbox, physical sciences, and additive manufacturing with appropriately sourced and propagated human cells, which retain the fundamental genetic and epigenetic landscape. This Special Issue will explore the growing body of evidence supporting these models' experimental value. We look forward to receiving your contributions, whether they be in the form of an article or a review on the topic.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
