# Harnessing Gene Expression in Ewing Sarcoma: How to Increase the Therapeutic Opportunities

### Message from the Guest Editor

Ewing sarcoma is a highly aggressive bone and soft tissue tumor that primarily affects children and young adults. Despite advancements in treatment, the prognosis for patients with metastatic or recurrent Ewing sarcoma remains poor. Therefore, there is a critical need to explore novel therapeutic strategies to improve outcomes for these patients. Harnessing gene expression in Ewing sarcoma represents a promising approach to increase therapeutic opportunities and enhance treatment efficacy. We look forward to receiving your contributions. Dr. Hassan Mubarak Ishqi

## About the Journal

### Message from the Editor-in-Chief

*Cancers* is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
