Harnessing Gene Expression in Ewing Sarcoma: How to Increase the Therapeutic Opportunities

Message from the Guest Editor

Ewing sarcoma is a highly aggressive bone and soft tissue tumor that primarily affects children and young adults. Despite advancements in treatment, the prognosis for patients with metastatic or recurrent Ewing sarcoma remains poor. Therefore, there is a critical need to explore novel therapeutic strategies to improve outcomes for these patients. Harnessing gene expression in Ewing sarcoma represents a promising approach to increase therapeutic opportunities and enhance treatment efficacy. We look forward to receiving your contributions. Dr. Hassan Mubarak Ishqi

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
