Inflammation in Cancers

Message from the Guest Editor

Inflammation is often closely related to tumorigenesis and is a recognized hallmark of cancer. It has been widely reported that inflammatory processes modulate the course of cancer by stimulating or inhibiting its growth. Cancer development and its response to therapy are regulated by inflammation, which either promotes or suppresses tumor progression. A deeper understanding of common pathways, implicated between inflammation and cancer, may pave the way to the introduction of new diagnostic and novel therapeutics. This Special Issue invites papers that cover all aspects of the role played by inflammation in cancer development and progression.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
