Tumor Microenvironment: Intercellular Communication

Message from the Guest Editor

The tumor microenvironment (TME) plays a crucial role in cancer progression, metastasis, and therapeutic resistance. It involves a complex interplay among tumor cells, stromal cells, immune cells, and the extracellular matrix. The intercellular communication and signal transduction that occurs within the TME are critical aspects of this interplay. This special issue of *Cancers* aims to provide a comprehensive overview of the key signaling molecules and pathways involved in these communication processes and their effects on tumor behavior. Additionally, we will publish reviews and original research that offer new insights into recent advances in targeting these signaling pathways for cancer treatment.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
