Special Issue

Recent Advances in Epidemiology of Childhood Cancer

Message from the Guest Editors

Childhood cancer remains a major cause of death in children, and, while survival is high in developed countries, there are serious inequalities between regions and countries worldwide. This Special Issue will address all aspects of childhood cancer epidemiology. Possible topics include (but are not limited to) the improvement of childhood cancer registries and their output, research on the environmental causes of cancer in children, and the genetic and molecular epidemiology of childhood cancer. We invite submissions sharing applications of epidemiology in the evaluation of population-based healthcare results and the quality of life of survivors of childhood cancer, considering, when possible, the impact of social determinants and inequalities in access to care. Papers exploring improvements in the application of biostatistics to the area of rare tumours, developments in ethically acceptable record linkage, and appropriate artificial intelligence tools are also welcome. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.
