Cancer Prevention and Screening: Innovations, Implementation, and Access

Message from the Guest Editors

We are looking for studies of innovative interventions—at the individual, clinic, community, and health plan organizational levels—to improve uptake, adherence, and follow-up of recommended cancer preventive measures in real-world settings. The persistent burden of late-stage diagnoses for preventable cancers demonstrates the importance of developing, adapting, implementing, evaluating, and disseminating innovations focused on cancer prevention and early detection. Despite strong evidence that cancer is preventable via healthy eating, physical activity, vaccination, and screening, many populations experience barriers in awareness and access to cancer prevention. As cancer prevention remains uneven across populations, strategies are needed to improve equity in access and ensure the best outcomes for all. To advance equity and increase transparency, we will accept studies where structural barriers overpower the strategy and where interventions were found ineffective for certain racial/ethnic groups, geographic areas, clinic types, etc. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief
