Urogenital Neoplasms Pathology

Message from the Guest Editor

Uro-oncological diseases affect a large population of middle and advanced age in both sexes. The anatomical extension of the urinary tract determines diagnostic difficulties that require ever more innovative technology. Small-caliber fiber-optic instruments and high-definition vision systems increase diagnostic accuracy. Equally, the histopathological, molecular and genetic methods of investigation allow the resolution of the differential diagnosis. The treatment of urological neoplasms relies on more comfortable techniques for the patient, such as laparoscopy and robotic surgery, which make it possible to obtain a high standard of care and functional preservation by reducing the hospitalization time. Robotic surgery, in particular, finds application in all intra-abdominal urological neoplasms, and for this reason it has expanded all over the world. Urologists who have extensive experience in these areas are invited to contribute their experiences, projects and achievements to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
