Melanoma: Clinical Trials and Translational Research

Message from the Guest Editors

Melanoma is the deadliest type of skin cancer. It arises from melanocytes in skin, mucous membranes, eyes, or the central nervous system, **following genetic, epigenetic and allo genetic alterations**, and has the potential to spread to any organ of the body. Generally, this tumor can be cured, if diagnosed in the early stages, with high survival rates. However, patients with advanced disease have a poor prognosis. In the past two decades, much progress has been made in the diagnosis and treatment of melanoma, also thanks to the increased knowledge of tumor biology, which has led to a targeted approach and personalized melanoma therapeutic strategies. The aim of this Special Issue is to publish innovative and high quality original/review articles focused on the development and improvement of new ways to prevent, diagnose, and treat melanoma by translating findings observed in a laboratory into clinical applications. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
