Advances in Surgery of Head and Neck Squamous Cell Carcinoma

Message from the Guest Editor

Head and neck squamous cell carcinoma is a type of cancer that affects the tissues in the head and neck region. It can be a challenging disease to treat, but advances in surgery have made the process much more successful. Over the years, surgeons have developed new techniques and technologies that allow for more precise and effective removal of cancerous cells. This has led to better outcomes for patients and a higher likelihood of long-term survival. Some of the key advances in surgery for head and neck squamous cell carcinoma include minimally invasive techniques, precision-image-guided surgery, and the use of robots to assist with surgery. These innovations have helped reduce complications, speed up recovery times for patients, and improve adequate resections. Overall, the field of surgery for head and neck squamous cell carcinoma is rapidly advancing, and patients can expect to benefit from these improvements in the years to come. In this Special Issue, we aim to collect original research articles and review articles to present and discuss data on surgical advances in head and neck squamous cell carcinoma.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
