

## Special Issue

# New Insights into Surgical Treatment of Hepatocellular Carcinoma

### Message from the Guest Editor

Hepatocellular carcinoma (HCC) stands as the sixth most common cancer and the fourth most common cause of cancer-related death worldwide. Curative treatments are applicable in a minority of selected patients. HCCs most likely arise from chronic liver diseases; thus, liver transplantation theoretically offers the best chances of a cure. However, the broad use of transplantation for HCC faces various constraints, advocating for surgical resection as one of the preferred options provided there is adequate patient selection and anticipation of the postoperative risk of liver failure. With this Special Issue in *Cancers*, we welcome original pre-clinical or clinical research articles and comprehensive or systematic reviews focusing on the surgical treatment of HCC through the spectrum of evolving tools, strategies, indications, and techniques.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
