PET Imaging in Prostate Cancer

Message from the Guest Editors

The introduction of molecular imaging, namely positron emission tomography (PET) imaging, in prostate cancer has already changed the clinical outcomes and therapeutic management of patients. PET imaging has proved to have higher diagnostic accuracy compared to conventional imaging, especially for staging high-risk patients and identifying metastatic locations in the case of disease recurrence. Several PET radiopharmaceuticals have been proposed over the last decade, and these diagnostic techniques are now currently placed under the umbrella term “new-generation imaging”. This Special Issue aims to collect original articles and reviews on the role of PET imaging in prostate cancer, with a special focus on innovative approaches and translational imaging.

Guest Editors

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
