Palliative Care and Pain Management in Cancer

Message from the Guest Editors

Pain is one of the most feared symptoms of cancer and is frequently under-evaluated and undertreated, despite the available control options. However, considerable progress has been made in the study, diagnosis, and treatment of cancer-related pain. Among patients with cancer, 58% experience pain: 33% report one type of pain, another 33% experience two types of pain, and the remaining 33% endure three or more types of pain. In patients with advanced cancer and palliative care settings, approximately two in three patients report suffering from pain. Pain significantly impacts patients' daily lives, leading to a reduction in their quality of life (QoL). Moreover, there is a clear relationship between psychosocial variables and oncologic pain. Different approaches must be integrated into pain management strategies. This Special Issue of *Cancers* therefore includes new research articles and timely reviews covering all aspects of pharmacological and non-pharmacological treatments for pain management in patients with advanced cancer.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
