Improving Surgical Care for Patients with Hepatobiliary and Pancreatic Cancers

Message from the Guest Editors

Cancers of the hepatic, pancreatic and biliary (HPB) system are associated with poor prognosis, with the majority of cases presenting at an advanced stage, rendering them unsuitable for potentially curative surgical resection. For the proportion of patients who have localized disease amenable to resection, surgery is normally a major under-taking, carrying a moderate risk of short- and medium-term morbidity. This is especially problematic, given that many patients who undergo this major surgery experience the problem of early disease recurrence. There is therefore a great need for enhancement of patient selection for these procedures, development of alternative treatment strategies for patients at high risk of early disease recurrence, and also a review of peri- and intra-operative strategies to enhance recovery from major HPB surgery. This special edition will address the discovery of prognostic biomarkers in HPB cancer, biomarker-driven treatment strategies for HPB cancer, and the relationship between short-term and oncological outcomes after major HPB surgery.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
