Chemotherapy for Primary Liver Cancer: Recent Updates and Future Perspectives

Message from the Guest Editor

Worldwide, primary liver cancer is the sixth most common type of cancer and the third most common cause of death, with hepatocellular carcinoma (HCC) accounting for approximately 80% and intrahepatic cholangiocarcinoma (CC) approximately 15% of histological types. Treatment options for HCC and intrahepatic CC have increased, and long-term survival has been achieved. On the other hand, countermeasures against immune-related adverse events have become necessary. We expect to further improve therapeutic outcomes by understanding that hepatocellular carcinoma has a variety of cellular origins and tumor microenvironments. We invite you to contribute to this Special Issue on "Chemotherapy of Primary Liver Cancer". Original research articles and reviews are welcome in this Special Issue. Areas of research may include (but are not limited to) the following:

- Diagnosis of chemotherapy efficacy (including biomarkers and imaging techniques);
- Combination of locoregional therapy (transcatheter arterial chemoembolization or hepatic arterial infusion chemotherapy) and systemic drug therapy.

I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
