## Antioxidants in Cancers

### Message from the Guest Editor

Antioxidants have long been studied for their protective role in preventing cellular damage caused by oxidative stress, which is a known factor in cancer development. However, recent research has shown that the relationship between antioxidants and cancer is far more complex than previously thought. In some cases, antioxidants may help prevent cancer, while in others, they might support tumor growth or interfere with cancer treatments. This Special Issue will explore these nuanced roles of antioxidants in cancer biology, examining how they interact with cancer cells, influence the tumor microenvironment, and affect responses to therapies. We aim to highlight research that investigates both natural and synthetic antioxidants and their potential in cancer prevention and treatment. By bringing together these diverse perspectives, we hope to better understand how antioxidants can be integrated into more personalized and effective cancer therapies.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
