Breast Cancer Survivorship: Challenges and Innovations from Treatment to Long-Term Care

Message from the Guest Editor

Breast cancer and its treatments are not without late effects, which can impact both the health and well-being of breast cancer survivors. Indeed, they are particularly vulnerable to life-threatening long-term complications such as cardiovascular complications and secondary primary cancers. Other late effects of breast cancer treatments, such as endocrine dysfunction, neurotoxicity, and societal impacts (such as reduced quality of life, persistent fatigue, and health inequalities), are also suggested but require further investigation. These challenges create a significant burden on both public health systems and economies. In this Special Issue, we invite original research articles, reviews, and perspectives that deepen our understanding of the late effects of breast cancer treatments and their epidemiology, and potential beneficial interventions in breast cancer survivors. We are interested in a wide range of studies that can also explore the effects of supportive and monitoring care in breast cancer survivors, as well as those that address breast cancer survivors' well-being, quality of life, and the societal and health inequalities they face.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
