

## Special Issue

# New Insights into Prostate Cancer Radiotherapy

### Message from the Guest Editor

Prostate cancer is one of the most common types of cancer. Over the past few decades, radiotherapy has played a major role in the treatment of this disease. With the development of technology and long-term clinical experience, radiotherapy is widely applied in all clinical stages of the disease and has made significant advances in treatment. Ongoing research into radiotherapy could further improve cancer control and survival outcomes for patients with this cancer. This Special Issue focuses on the latest topics in radiotherapy for prostate malignancies, including the treatment of patients, basic research, clinical applications, etc., and will, hopefully, contribute to the advancement of current clinical and laboratory research on prostate cancer radiotherapy.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.
