

Special Issue

PET/CT in Radiation Oncology

Message from the Guest Editors

Positron emission tomography-computed tomography (PET-CT) has emerged as a crucial imaging modality in radiation oncology, offering unmatched performance in tumour staging and treatment response assessment. This Special Issue aims to explore the transformative role of PET-CT using different radiotracers, tumour volume delineation, adaptive radiotherapy, and monitoring of treatment efficacy, ultimately aiming to improve patient survival and quality of life. The articles in this issue will provide insight into future directions, such as theranostics, integration with artificial intelligence, and advancing personalised care.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
