

## Special Issue

# Research on Clinical Treatment of Mesothelioma

### Message from the Guest Editors

Pleural mesothelioma (PM) is a rare and aggressive neoplasm that originates from the pleural mesothelium and whose onset is mainly linked to occupational and/or environmental exposure to asbestos. Conventional chemotherapy as well as targeted therapies have failed against disease progression and patients' prognoses are still poor; in some instances, supportive care is the only therapeutic option. However, the advent of immunotherapy, the development of advanced cell therapy platforms, and the application of innovative technologies in cancer management have allowed some effective improvement in PM as well. Thus, the aim of the present Special Issue is to recapitulate the current standard of care for this orphan cancer and to focus on novel and more promising approaches in PM screening, diagnosis, and treatment.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
