Minimally Invasive Surgery and Robotic Techniques in GI Cancer Treatment

Message from the Guest Editors

The field of gastrointestinal (GI) cancer treatment has undergone a significant transformation with the rapid evolution of minimally invasive and robotic-assisted surgical techniques. These cutting-edge approaches have redefined the standard of care, offering unparalleled precision, shorter recovery periods, reduced postoperative complications, and improved long-term patient outcomes. The integration of advanced laparoscopic and robotic technologies has enabled surgeons to perform intricate oncologic procedures with greater dexterity, enhanced visualization, and minimal disruption to surrounding healthy tissues.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
