

Special Issue

Efficacy and Complications of Liver Resection for Liver Cancer

Message from the Guest Editors

Liver resection represents one of the most successful strategies for the management of several different types of primitive and secondary liver cancer. This Special Issue on “Efficacy and Complications of Liver Resection for Liver Cancer” will address the current efforts and advances in the field of liver resection. In particular, the first aim of this Special Issue will be to report the development of new technologies aimed at improving surgical quality in terms of post-operative death or tumor-free survival. As the second aim, special attention will be given to the complications correlated with the surgical approach, with the intent to minimize the potential risks connected with surgery. The Special Issue will show different international perspectives of improving the quality of hepatic resection. We hope that this Special Issue facilitates recognition and understanding of the importance of new technologies and the role of preventing post-operative complications in the use of liver resection for the management of liver cancer.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
