Prevention, Screening and Early Detection of Cancer

Message from the Guest Editors

In recent years, there have been major advancements in understanding cancer in the fields of pathophysiology, pathology, tumor genetic, targeted therapy and precision medicine. Yet, by all means, the best therapy of cancer is prevention or at least screening and early detection. Prevention focuses on lifestyle modifications and risk factor reduction, such as avoiding tobacco, limiting alcohol, maintaining a healthy diet and protecting against harmful UV radiation. Screening involves testing asymptomatic individuals for early signs of cancer, allowing for timely intervention before the disease progresses. This Special Issue will focus on innovative research and advancements aimed at improving cancer outcomes through early diagnosis and preventive strategies. It will highlight the importance of screening tools and programs, biomarkers, imaging techniques and genetic tools in identifying cancers at their earliest, most treatable stages. This Special Issue also explores risk assessment methods, lifestyle modifications and public health initiatives to prevent cancer development.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
