Study on Acute Myeloid Leukemia

Message from the Guest Editor

Acute Myeloid Leukemia (AML) is a type of cancer that affects the blood and bone marrow, and is characterized by the rapid growth of abnormal white blood cells. The strategies employed to treat AML are developing, with chemotherapy and other therapies being utilized. AML occurs due to mutations in the hematopoietic stem cells, leading to an uncontrolled proliferation of immature blood cells. The diagnosis of AML is typically based on blood tests, bone marrow biopsy, and genetic profiling to identify mutations. In summary, this Special Issue will focus on the various treatment modalities employed to address acute myeloid leukemia.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
