The Role of Aromatase Inhibitors in Breast Cancer Treatment

Message from the Guest Editor

Aromatase inhibitors play a crucial role in breast cancer treatment by blocking the enzyme aromatase, which is responsible for estrogen production. Estrogen fuels the growth of hormone receptor-positive breast cancers, and these inhibitors help reduce estrogen levels, inhibiting cancer cell proliferation. Often used in postmenopausal women, aromatase inhibitors are a key component of hormone therapy, complementing other treatments to improve outcomes and reduce the risk of cancer recurrence.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
