# The Role of Aromatase Inhibitors in Breast Cancer Treatment

### Message from the Guest Editor

Aromatase inhibitors play a crucial role in breast cancer treatment by blocking the enzyme aromatase, which is responsible for estrogen production. Estrogen fuels the growth of hormone receptor-positive breast cancers, and these inhibitors help reduce estrogen levels, inhibiting cancer cell proliferation. Often used in postmenopausal women, aromatase inhibitors are a key component of hormone therapy, complementing other treatments to improve outcomes and reduce the risk of cancer recurrence.

### Guest Editor

Dr. Chandra Bhushan Mishra

Department of Pharmacology & Chemical Biology, Baylor College of Medicine, Baylor Plaza, Houston, TX 77030, USA

### Deadline for manuscript submissions

closed (1 September 2025)

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
