Research of Anti-tumor Immune Responses to Gastrointestinal (GI) Cancers

Message from the Guest Editor

New treatments such as immune checkpoint inhibitor, molecular-targeted agent, and antibody drug conjugate, developed for GI cancer, result in improving patient's outcome in the last decade. We believe that deep insight into the tumor immunological background of GI cancer will develop novel combination immunotherapy. Moreover, analyzing molecular background by gene panel testing using next-generation sequencer and then appropriate patient's selection are essential for the development of combination immunotherapy. Based on tumor immunology, Special Issue will highlight recent important and promising research for making breakthrough in immunotherapy for GI cancer.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
