

# Special Issue

## Molecular Pathways in Cancers

### Message from the Guest Editors

Despite the continuous advances in anticancer therapies, the survival rates in most tumor types remain very poor, especially in those patients with advanced stages of the disease. There is a direct relationship between our level of understanding of each cancer's molecular pathogenesis and our capacity to develop novel and effective therapeutic strategies.

For this Special Issue, we welcome contributions that improve our knowledge of the molecular alterations that deregulate key signaling pathways and govern tumor progression in highly prevalent human cancers. We would like to focus this Special Issue on studies that combine basic and translational research and provide significant findings with a clear clinical and therapeutic impact.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
