The Mechanisms of Physical Activity, Diet, and Body Composition in Cancer Prevention and Control

Message from the Guest Editor

Physical activity, diet, and body composition are important determinants of cancer risk and prognosis. However, our understanding of the mechanisms through which these factors influence cancer initiation and progression remains incomplete. Such mechanisms may include, but are not limited to, direct effects on the tumor, indirect effects on the tumor microenvironment, and improved delivery of anti-cancer treatment. This Special Issue of *Cancers* will include articles that describe novel discoveries which clarify our understanding of how physical activity, diet, and body composition impact cancer initiation and progression. Basic, translational, and clinical studies on all tumor types will be included. This Special Issue will inform the development of future lifestyle, pharmacotherapy, and surgical interventions for cancer prevention and control.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
