Advances in Breast Conservation Therapy: A Global Perspective

Message from the Guest Editor

Breast conservation therapy has been established as one of the mainstays of breast cancer treatment. It is accepted that it offers overall survival equivalent to mastectomy, and some studies have even suggested that it may offer superior survival. There are global variations in the utilization and implementation of breast conservation therapy. However, healthcare systems, access to radiation and plastic surgery, and the cultural zeitgeist can affect its use. This Special Issue offers international global perspectives spanning several continents, including North America, Asia, Africa, and Europe, on the unique characteristics of BCT in different parts of the world. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
