Translational Research of Liver Cancer

Message from the Guest Editor

The incidence of liver cancers has more than tripled over the past 30 years. Significant progress has been made recently with regard to treatment options, and in addition to immunotherapies and anti-angiogenic agents, targeted therapies have been approved for specific molecular subsets. The growing number of treatment options for primary liver cancers, i.e., mainly hepatocellular carcinomas and intrahepatic cholangiocarcinomas, requires novel advances in biomarker discovery, patient stratification, and treatment sequencing more than ever. In this Special Edition, I would like to highlight cutting-edge translational work which might hopefully shed more light into the biology of primary liver cancers and also guide the necessary next steps in developing better treatment strategies for patients at all stages of liver cancer. Your translational research has significantly contributed to the field beyond pure drug development, and I would like to invite you to share your work with other colleagues around the globe. I look forward to your response.

About the Journal

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
