## Treatment of Gastric Cancer

### Message from the Guest Editors

The treatment of gastric cancer has evolved with the recognition of the prognostic value of extended lymphadenectomy and use of multimodal strategies. At the same time, the potential roles of minimally invasive (endoscopic as well as laparoscopic) approaches and enhanced post-operative recovery protocols have been shown. Oncologists routinely participate in preoperative phase with surgeries conducted in curable cases, sometimes more surgery in incurable ones, and a longer term perspective on the quantity and quality of life of patients with durable responses. This Special Issue aims to explore the areas remodeled or reconsidered in the management of gastric cancer in the 2000s.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.
