

## Special Issue

# Advances in Cancer Data and Statistics

### Message from the Guest Editor

Data on cancer patients, their disease, treatments and outcomes are being collected worldwide through population-based and hospital cancer registries, the purpose of which exceeds the scope of narrow-focus research. Availability of data is also empowering the advancements in statistical methods and inferences based on their application. There is great potential for further improvement of data usage in exploring novel possibilities for linking health registries to various non-health databases allowing for analyses of risk or prognostic factors that influence cancer outcomes. This Special Issue will highlight the current state of the art and future prospects in cancer epidemiology based on data collected by cancer registries. Both novel usage of data as well as new epidemiological or statistical approaches are welcomed.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
