Overcoming Drug Resistance to Systemic Therapy in Breast Cancer

Message from the Guest Editors

Breast cancer is the second most common malignancy in women worldwide. The cause of cancer is multifactorial. The early diagnosis and appropriate treatment of cancer can improve the chances of survival. Other methods of early detection include self-examination, clinical breast examination, and imaging tests such as ultrasound and MRI. Breast cancer is a heterogeneous disease that is considered complex, as there is great diversity within tumors. Despite extensive research, the exact etiology of the disease has not yet been elucidated, as the identified genetic and epigenetic interactions cannot explain the cause of breast cancer in most cases. This Special Issue will explore the current state of research in the field of drug resistance, including the mechanisms of drug resistance, the development of new drugs and immunotherapies, and the potential for combination therapies. It will also discuss the challenges associated with drug resistance and the strategies that can be used to address them. Finally, the Special Issue will consider the implications of drug resistance for public health and the need for new approaches to combat this growing problem.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
